MOBILI TRADING CORP.

FABRICOTTI

MOBILI TRADING CORP.

WE BELIEVE THAT WE CAN SUSTAIN THE NEEDS OF CONSUMERS IN THE AGRICULTURAL INDUSTRY THROUGH OUR FERTILIZER PRODUCTS THAT ARE CAREFULLY CRAFTED AND IS THE MOST EFFICIENT AND ENVIRONMENTALLY-FRIENDLY PRODUCT HERE IN LOCAL AND ABROAD.

OUR VISION

To be a means of recognition in the global market by creating a holistic and sustainable business modality that stimulates, promotes, and supports organic raw materials for the betterment of the soil and environment.

OUR MISSION

To be a trusted and innovative global leading company providing true organic and true wellness products and solutions increasingly specialized agriculture for the farming business to increase the quality and production of yielding crops.

www.fabricottimobili.com

OUR GOAL

To import and export consumer products for their supply and distribution

To achieve eco-sustainable agricultural productivity and commitment to quality

To restore power and control to the Filipino farmers in curing Philippine farmlands

To lower the rate of production cost and; Innovation of products and solutions

OUR COMMITMENT

To introduce uniqueness in different products and a successful business model that is committed to service and quality that benefits all.

To supply genuine organic material products and other goods to our consumers.

To support the livelihood and well-being of consumers by providing goods and services at a reasonable cost.

To support natural, sustainable, and organic agricultural practices encouraging a healthy and safe food production

To support the livelihood and well-being of consumers by providing goods and services at a reasonable cost.

OUR CORE VALUES

Our success is founded on four Core Values

 Integrity

 Loyalty

 Commitment

 Humility

We stand with the Motto
"Our focus is on our client's success"

ABOUT THE

COMPANY

Fabricotti Mobili Trading Corp. was established in the year 2018, that specializes the agricultural needs of the Philippines and exporting its products in Southeast Asia especially in countries; Thailand, Malaysia, and Vietnam.

And also, an affiliate of **SAM network company** located in Thailand that manages the distribution, trading exporter of our agricultural products. Under **Fabricotti Mobili Trading Corp.**, we have agricultural products namely; Norinano, a plant supplement that strengthens back the soil that was weakened by agrochemical inputs. And plant nutrients such as; Amino gold Plus, Liquid Bio-N, Nutrinano Plus, and ArcoN plus composed mainly of nitrogen (N), phosphorus (P), and potassium (K). Altogether, they make up the triad known as (NPK) from Thailand that has the capacity to generate nutrients needed by the plants to increase their standard growth and development.

We are licensed to operate as an accredited fertilizer importer and we own the Norinano plus fertilizer in the Philippines.

FABRICOTTI
MOBILI TRADING CORP.

CROP NUTRITION FERTILIZER

Our goal is Soil conservation. For this reason, the heavy use of chemical fertilizer is a major environmental issue in agricultural fields in sustaining the growth of plants. With Norinano, this has been the tool in modern agriculture that is expected to become a driving force for food and nutrition in the near future. Our product is existing proof that we at WLEX, among the leading companies in the production of biostimulants and organic and organo-mineral fertilizers, have always been mindful of the needs and well-being of our clients.

NORINANO PLUS

Since 2019, we have been developing a model to support agricultural broad-based development progress in terms of social, environmental, and economic aspects. Our product is made of 100% Organic fertilizers made from Japanese seaweed to boost your crops and regenerate soil back to life and reliable partner in farm and health.

AMINOPLUS GOLD PLUS

Amino acids can directly or indirectly affect the physiological activity of plants. The process of this product is; it is added to plants by incorporating them into the soil to improve the microflora of the soil making nutrients easier to be absorbed. Subsequently, organic agriculture has certain derived substances that produce less greenhouse gas emissions and are considerably more climate-friendly.

LIQUID BIO-N PLUS

In farming, the most important nutrient is Nitrogen. Plants take up more nitrogen than any other elements and it has an important role in cultivating the plants that involve a variety of vital processes such as growth, leaf acreage, and biomass yield production.

NUTRINANO PLUS

The Nutrinano product is composed of different micronutrients and its goal is to diminish the shedding of plants, lessen the problem of cracking, and intensification of its flower, color, and food taste.

ARCO N PLUS

The ArcoN plus product; consists of a natural organic compound in a form of a pellet that is covered with 17 layers of fertilizer to provide solid composure and more vegetation to the refined lands and avoid nutrient loss from evaporation to extend the nutrient emanation to utilize plants longer.

Drip Irrigation

Drip irrigation is today's need to save future because Water – nature's gift to mankind is not unlimited and free forever. World water resources are fast diminishing. The one and only answer to this problem are Blue Drip Irrigation Systems.

KSNM Black Spray

irrigation is today's need to save future because Water – nature's gift to mankind is not unlimited and free forever. World water resources are fast diminishing. The one and only answer to this problem are Blue Drip Irrigation Systems.

Center irrigation

The central pivot irrigation system allows you to irrigate fields of different sizes, starting at 1 hectare per tower,

Rotating sprinkler

a full line of sprinkler irrigation products including pivot sprinklers, pressure regulators, and end of pivot gun, and control valves. Unmatched farm irrigation sprinklers designed for your specific field conditions and crops that result in higher crop yields and quality at harvest

Hose-fed

Linear irrigation machines travel back and forth across your field instead of around a central point as a center pivot does.

Precision Farming Tools:

GPS

Guided Systems - ensure accurate navigation and minimize overlap during planting, spraying, and harvesting.

Precision Farming Tools:

VRT

Customize seed, fertilizer, and pesticide application rates based on field variability.

Solution Partner Program

Bring a leading crop management system to enterprise farms, food companies and other agri-food industry stakeholders.

This Partner Program is an ideal fit for:

- IT Companies
- System Integrators (ISV)
- CRM & ERP Providers
- Consulting Companies

PARTNER WITH US!

An easy-to-use farm management software designed to support farmers in making precise agronomic decisions based on real-time field insights and simplifying farm administration.

Technology Partner

FSP Technology Partners develop integrations with the industry leading AGRIVI Farm Management Software platform and collaboration capabilities to deliver enhanced value to our joint customers.

Join **FSP Partner Network** who are taking advantage of our technology integration capabilities to extend the reach and adoption of their solution, but to list your solution on **FSP Marketplace**.

CURRENT SCENARIO

As of now, the population in the Philippines has been increasing, the need for food grows and individuals' needs and expectations increase the proportion.

To make the food available, farmers and fishermen need to produce enough for 105 million Filipinos in a country that is growing 1.9% each year. To make food affordable, we need to reduce production costs and increase people's employment aptitude.

It is estimated that there will be more than 9 billion inhabitants on Earth by the year 2050. 2.3 billion more than it is today. The population growth will lead to increased food needs, while the spread of well-being will increase demand for meat, eggs, and dairy products. Therefore, agricultural production needs to be increased. Our planet can withstand such population growth only if more sustainable agriculture is developed.
